By Carnegie Institution Laboratory

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 Excerpt: .65 mm.; diameter at base 9 to 12 mm.; the main branches subdivide 3 or 4 times between the base and summit. Sets of branches from 12 to 30 mm. apart. Branchlets up to nearly 40 mm. long, basal diameter 7 mm. The following are measurements of branchlets: Axial corallites, dimensions as given in table. Walls, thickness somewhat less than one-third the corallite diameter; texture relatively dense; outer surface with distinct, plate-like costules, with synapticulae in the intercostular spaces. Septa in two well-developed cycles; the primaries may meet deep down; secondaries smaller but distinct. Radial corallites unequal, proliferous and non-proliferous, protuberant and immersed or subimmersed. The non-proliferous protuberant corallites attain their full size near the branch ends, within about 5 mm., where they are spreading at right angles or ascend slightly; length 2.5 to 3 mm.; diameter 2 mm.; with a thicker lower wall, a poorly...
