*This book may be worth purchasing. I am quite late in start reading this one, but better then never.  
Once you begin to read the book, it is extremely difficult to leave it before concluding.

## VALIDATION OF HYGROTHERMAL MATERIAL MODELLING UNDER CONSIDERATION OF THE HYSTERESIS OF MOISTURE STORAGE.

Fraunhofer Irb Stuttgart Mrz 2016, 2016. Taschenbuch. Book Condition: Neu. 243x172x19 mm. Neuware - The achievable accuracy of hygrothermal building component simulation is significantly dependent on the applied material functions. These functions are determined by the material modelling marking the connection between the basic storage and transport parameters which are obtained from basic measurements, and the storage and transport coefficients which are defined within the balance and flow equations. It is the aim of the present study to develop a flexible and widely applicable material model which is not restricted to the current level of the transport theory. Furthermore, limits and options of this model are to be validated by means of four building materials on the basis of special transient moisture profile measurements. By the presented study, the material modelling has been decisively further developed, the set of basic measurement methods has been extended by a substantial experiment and the instantaneous profile measurement technique has been made applicable to Building Physics. Moreover, the influences of the process history and the process dynamics on the moisture transport and the resulting moisture profiles could be shown and proven. By that, not only a material model is now available which perfectly applies to the requirements of flexibility, applicability and extendibility. The obtained data provides also a powerful basis for further research and development. 236 pp. Englisch.
